

Abstract

A medium sized company from South East Sweden, a leading manufacturer of domestic ventilation, is looking for expertise to develop their product portfolio. They are searching for experts which mainly could improve the two aspects:

- **acoustics, i.e. to reduce noise**
- **capacity, i.e. to increase the flow of air/time unit**

of their systems.

The expert (team) should be able to prove its experience before entering into a collaboration.

Description

A leading manufacturer of domestic ventilation wants to improve its product portfolio, and is therefore now looking for external expertise. The expert team will probably originate from a university or a research infrastructure.

The company's product portfolio covers components such as (among others):

- standard wall vents, which provide homes with a continuous draught free and filtrated airflow
- acoustic wall vents, which provide homes with a continuous draught free, sound reduced and filtrated airflow
- standard window vents, which are designed for mounting in the frame or upper part of the window
- acoustic window vents, which are designed for mounting in the frame or upper part of the window
- exhaust fans for bathrooms, shower- and laundry rooms, as well as other areas in need of ventilation

The company is now searching for experts which mainly could improve the two aspects:

- acoustics, i.e. to reduce noise
- capacity, i.e. to increase the flow of air/time unit

of these products.

Technical Specifications / Specific technical requirements of the request

Leading experts in their technical fields, which believe that they could improve the products described above - manufactured by this market leader in domestic ventilation.
